1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, 28-36, 46-59, 65-72 drawn to a pump assembly and pressure lock out arrangement, classified in class 417, subclass 572.
 - II. Claims 23-27, 64, drawn to method of preventing inadvertent inflation of an implantable prosthetic, classified in class 623, subclass 23.68.
 - III. Claims 43-45, drawn to a method of preventing a vacuum lock, classified in class 137, subclass 455+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II, III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the process can be practiced with another materially different product such as preventing inadvertent inflation of a blood pressure cuff.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
